USAGE

Place Silicone Mat - shiny side down, rough side up, on your in-vitro glass induction cooktop and then place your induction friendly cookware on top.

Using the silicone mat with in-vitro glass induction cooktops, the mat will not melt and is made from oven-grade silicone so it can also tolerate the heat of the pot as you cook, all whilst preventing slipping and scratching - a perfect accessory for anyone using induction cooktops.

Shiny side
(down to cooktop)

Rough side
(facing upwards)

FOR INDUCTIONS ONLY

Please note the Ecoheat Silicone Mat is designed to work with in-vitro glass induction cooktops only. Not suitable for use on ceramic glass cooktops.

Using the silicone mat on naked flame, gas, ceramic or other heating element style cooktops will result in damage to the silicone mat as induction heating differs from that of element heating cooking.

OPTIMAL OPERATING TEMPERATURES

60°C -> 200°C
